Venue :

Location : Santa Clara Convention Center, CA,
Santa Clara, CA, United States, ZIP: 10001

Wearable USA

The dedicated 2-day conference is carefully crafted by IDTechEx analysts. Over 60 dedicated speakers will cover topics from materials and manufacturing, to applications and markets, alongside a co-located exhibition with over 270 exhibitors / 90,015 sq ft.

New opportunities for wearable technologies Many consumer electronics sectors are saturated, which has brought wearable technology to the forefront of development. This is the only event to look at what is really needed and the capabilities offered by new technologies. Aimed at the full ecosystem from fashion brands to material providers, attendees will uniquely learn about the trends, products and opportunities in this sector. IDTechEx Show! Wearable USA is part of the IDTechEx Show! A series of synergistic events on Printed Electronics, wearable, sensors, IoT, 3D Printing, Graphene & 2D materials, energy storage and electric vehicles. Each of the events are full two-day executive conferences, co-located with a common exhibition. We co-locate these events because there is strong overlap across these topics, exposing you to the full relevant supply chains and customer and supplier bases, saving you time and money from attending separate events. With over 270 exhibitors and 3500 attendees expected under one roof, this is the largest event on emerging technologies. Attendees and exhibitors will have access to all co-located events. In one location, all these value chains are brought together creating a dynamic market place geared towards enabling technologies that will shape the future of wearable devices.
